**What is the Business?**

**Functional understanding from business side?**

| **Infra Design / Implementation** | **Application System Design / Implementation** |
|---|---|
| Cloud Architecture and Landing zone | |
| DevSecOps and Infra as a Code | |
| Cloud Migration and Application Modernization | |
| Governance, Compliance, Security, Backup, DR, Monitoring, FinOps | |
| Leadership, Transitions, vendor management, presales, service ownership, team upskilling, proposals, POC's, estimations, delivery Governance, SOP's, KT transitions, | |

**Suppose, we are doing migration of 100+ application in dev, uat and production.**

**Multiple subscriptions, Onpremises Datacenter, and cloud workloads**

Scalable, Robust, Secure, reliable, Portable, Governed, Highly Available, Cost Optimised, backedup, monitored, compliant.

**Tenant and Management Group Hierarchy**

Microsoft Entra ID, tenant Root group(platform mg, sandbox mg, decommissioned mg),

Tenant Subscription Boundaries, Management Group Hierarchy design, platform and application subscription design, azure policy and initiatives assignments, RBAC group formation, Subscription Onboarding and offlboarding, Policy exemptions with justifications

Best Practices of Tenant hierarchy and Entra ID

**Enterprise Governance And Identity**

User Management, Group Management, RBAC, Defender, Azure Policy etc..

Hub and Spoke Architecture, Centralized Inspection, Shared Connectivity, Controlled Egress

CAF module ke through Strategy banate hai jisme , Plan, ready, Adopt, govern, Secure aur manage jaise area ko cover krte hai..

**Hub And Spoke Networking Model**

IP address management and CIDR

Onpremises CIDR assessment

HUB vnet with best practices with Spoke with peering..

UDR firewall rules, Private DNS zones, Private Endpoint, VPN gateway and Express Route

**Security**

Identity Level, Networking Level, Governance Level, Compute Level

**Terraform Landing zone automation**

Terraform Landing zone automation, Best Practices of Terraform

Remote State, Least Priviledges access to State files, Encryption at rest

Reusable modules, linting, secret scanning, testing, costing, manual approvals,

Drift Detection using Pipelines

**Azure Repo and Azure DevSecOps Pipelines**

Branching Strategies, Branching Policies, No Delete main branch, Code owners

Templates( Validate and Test , Build, Deployment, Apply, Rollback)

Parallel Jobs, feature branchs short lived, PR mandatory, Max reviewers

trunk based branching strategy

Middleware setup with custom data script

**Cloud Migrations**

Migration Strategies, Prechecklist, Post checklist, assessment, readinesss, discovery

Cutover, Hypercare

Pre, Post and during checklist

**FinOps**

CostOptimization discussions, Idle Resources, Unattached disks, Oversized Computers, Unnecesary log ingestions, auto shutdown and start of vms

Reserved Capacity usages, Backup retention period configuration

**Backup Disaster recovery and High Availability**

LRS, ZRS, GRS, VMSS,  RTO, RPO

Primary Region and secondary regions

**Monitoring and Observability**

Azure Monitor

**Vendor Management**

Technical Task Assignment

Scope, Deliverables, Acceptance Criteria, Sprints, Dependencies, Risks, commercials, Accountability, SOW

RFP, RFI, Technical Evaluation Matrix ,Architecture Capabilities, Commercial Proposals,

Escalation Matrix Design, Least privileges access for the environment

Weekly Review, Retro Calls, Deliverable Signoff, Payment Milestone as per contract

Transitions and Knowledge Transfer

**Documentation Handover, RACI**

**Team Management and Upskilling Strategy**

**New initiatives - Senior Level of Interviews, KT sessions**
