

1. Create Repository in Azure Repos
 2. Clone Repository in VScode local
 3. Branch se feature branch bana dia
 4. Child and parent module resource group and storage account ka dal dia..
 5. Git status, git add , git commit -m "added code" and git push to feature branch
 6. feature branch se plan-checker pipeline banaya to only check plan
 7. agar plan sahi dikha toh PR raise kia... jisme ek reviewer dal dia..
 8. Agar sb sahi raha to approve kr dia reviewer ne.. else reject krke comment kr dia..
 9. Code merge hoke main me gya toh fir pipeline chala jaha pr plan and apply ho gya... Dono chlke setup complete ho gya ek environment ke lie...
- ye setup bana denge classic pipeline se...
