7th February - Rose Day

Is Community ke bhagwan aap sab ho

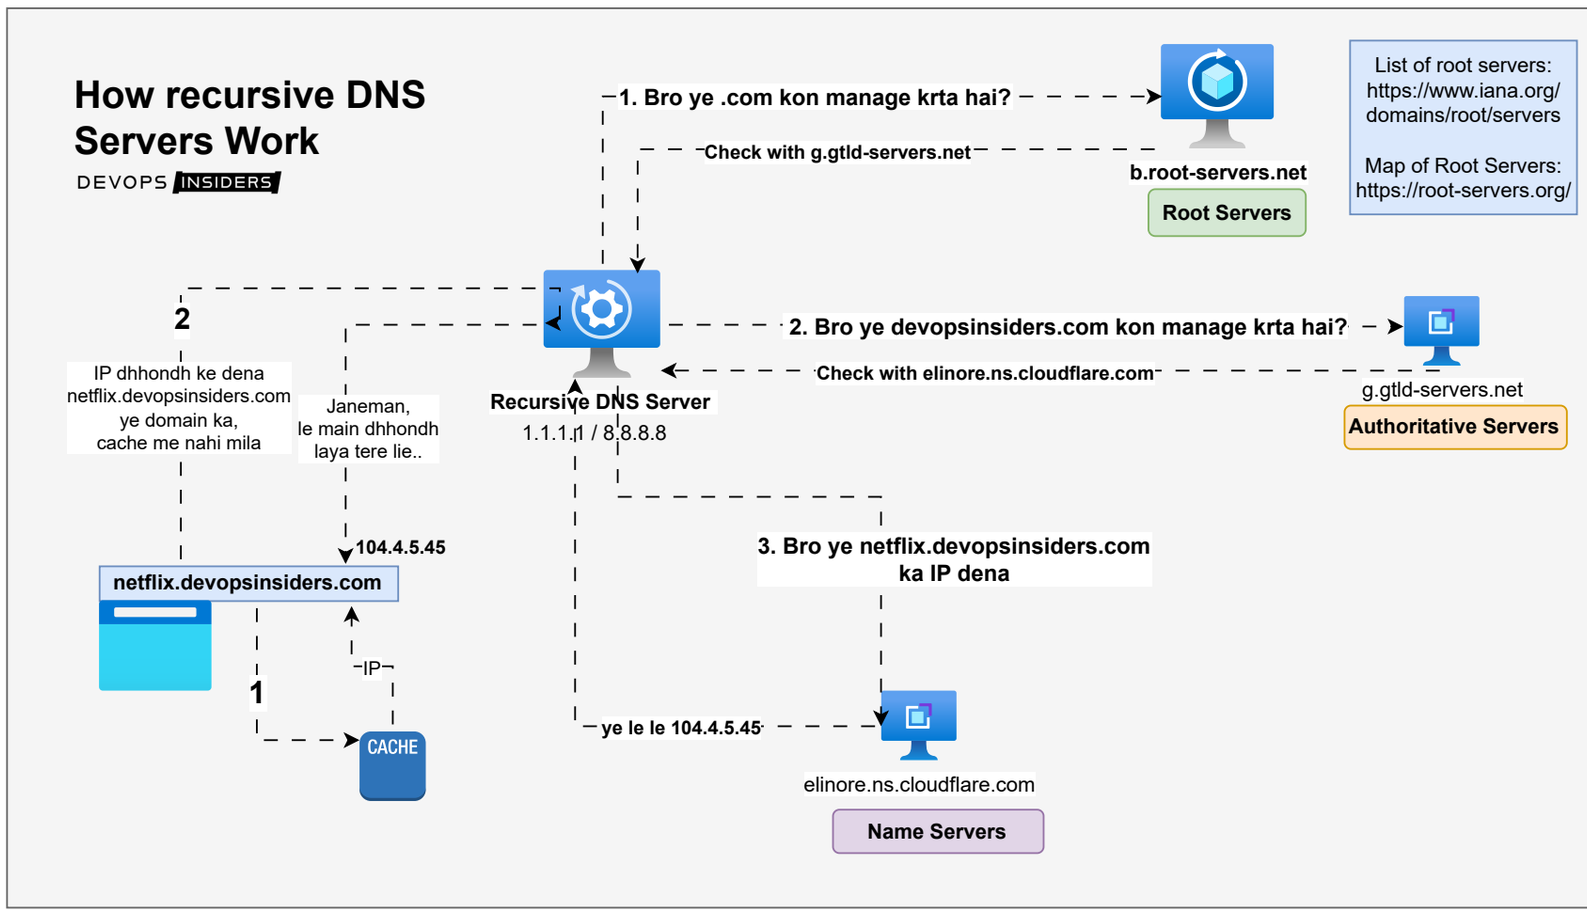

Private Endpoint ke pehle ek chiz pd lete hai.. DNS Server..

Domain Name System

Client, Brower, Stub resolver, recursive resolver, root servers, authoritative servers, A record ,Cname Record, Name servers, Top Level Domains etc..

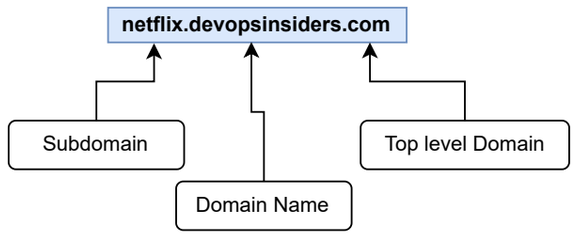

netflix.devopsinsiders.com → http://104.211.89.46/

Domain Registrar
GoDaddy, BigRock, NameCheap,

sanjay.business

http://netflix.veltrixrockets.space/

Web Server → **nginx**

DNS Server → **DNS software**

com, .in, .de = Top Level Domain

nslookup -type=NS net. b.root-servers.net

DNS Server bs browser ko domain ka IP dhhondne me help krta hai..

Browser direct webserver pr ip ke through connect krke website load kr leta hai..

Frontend | **Backend** | **Database**

PublicIP | **PublicIP**

axion.com

dashboard.axion.com - A Record - 12.23.34.54

api.axion.com - A Record - 54.12.21.56

DNS sahi resolve ho raha hai ya nahi vo check krne ke lie nslookup use karte hai..
