Storage account me tha "Enable from all networks"

Humko ek dedicated network se karna hai

- Service Endpoint
  - Ek storage account bana denge
  - Ek network banaenge usme subnet banaenge aur usme ek vm banaenge
  - Vnet ke andar jake, humne subnet setting me jake service endpoint me microsoft.storage select kia aur service endpoint ki routing enable ho gai..
  - Fir storage account me allow from selected network me for subnet select kr lia..
  - Lekin service endpoint ne sab kaam kr dia toh private endpoint ka jarurat hi kya hai?
- Private Endpoint

`diarchitectwa.blob.core.windows.net -> public IP - Vo vaisa hi rhega`

Access Keys | SAS Token | Entra ID

`diarchitectwa.blob.core.windows.net`

Authorization

Storage Account
By default, Public access

Network Access

- Private Endpoint ka jarurat hi kyu pada?
- Private Endpoint hota kya hai and how to enable manually and using automation?

Hyderabad Region

`89.54.56.12`

hyd123.storage.azure.com

`diarchitectwa`

dhondhustorage

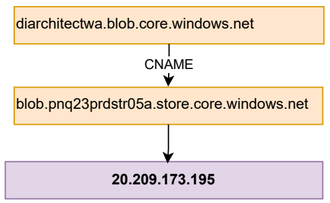

Network Access restrict karne ke lie

- Service Endpoint
  - hamare storage account account ke url ke piche me jo public ip hota hai vo vaisa hi rehta hai..
  - Hum bs apne storage account ko ek subnet se allow kr dete hai..
- Private Endpoint

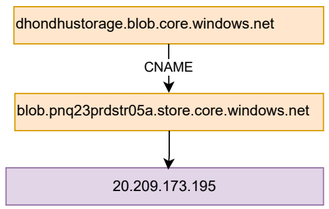

Problems

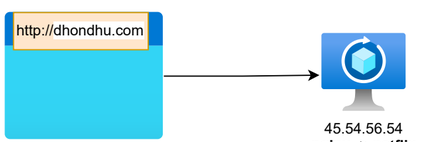

- Storage ka endpoint public hi rehta hai lekin is tarike se kya kia uska access restrict kr die..
- Jis subnet se aapne service endpoint joda hai bs usi subnet ki vms aapke storage account se connect kr paegi..
