Pas as you go kaise kare aur kaise paisa bachae?

1. MFA enable rakhna.. ek dum top security rakhna hai..

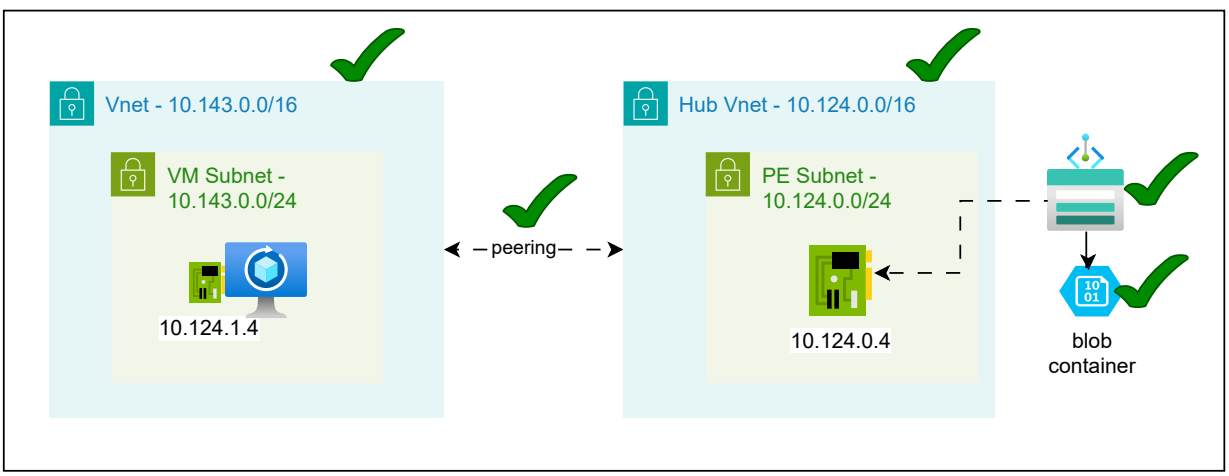

2. ID/password kisi ko nahi dena..

3. Kisi nae use ko onboard nahi krna..

4. Koi app registration banana hi nahi..

5. Kuch bhi banane ke baad ye command chala ke delete karna..
az group list --query "[].name" -o tsv | ForEach-Object { az group delete --name $_ --yes --no-wait }

Medical Urgency ke alawa kahi jaldibaaji nahi karna hai..

1. Ek RG banaenge

2. Usme 2 Vnet Banaenge

3. Pehla vnet ke andar ek subnet bana ke vm banega

4. Dono Vnet ko peering karenge

5. 2nd vnet me PE Subnet me private endpoint connect hoga storage account se aur Private endpoint pr private IP attach ho jaega..

6. Ab is private Ip ke through storage account blob ko privately access karenge

7.VM se access karne ke pehle nslookup laga ke DNS test karenge connectivity resolve ho raha hai ki nahi...

distorage654321.blob.core.windows.net -> ye private endpoint ke private IP pr resolve nahi ho raha hai...
toh hame DNS Zones banake is private endpoint ke private IP aur storage account ke host ko map karna pdega..
