DevOps + DevSecOps + SRE + AIOps + MLOps + Plaform Engineering + FinOps + GitOps = L1 - Operations Automator

System Design + Best Practices and Its Implementation + Agentic AI + AI governance, security, cost, compliances, AI observability, AI Gateways = L2

L1 + L2 = FDE

Koi bhi application kaise banta hai?

3 Tier Architecture

Frontend	Backend	Database
Presentation Layer	Business Logic	Data Storage
React, Angular, Next JS etc..	Python, Java, Dotnet, Go, Rust etc..	PostgreSQL, MySQL, SQL server, Cosmos DB, MongoDB, RDS etc..

Monolithic

Stone

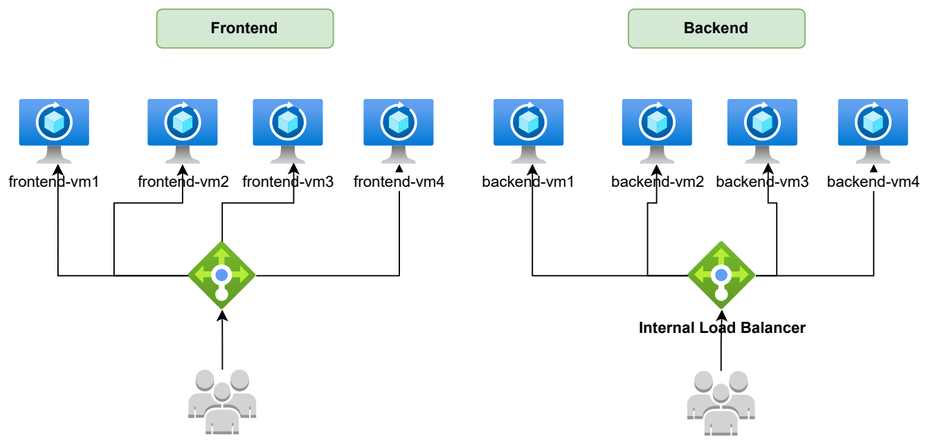

കല്ല്

Monolithic Application Virtualization pr deploy hota hai

Microservices

Microservices Application Containerization pr deploy hota hai like Kubernetes, PCF, Open Shift

Hame ye feel krna hai ki monolithic ki vvastha me kya problem hai..

NextOps kaise banaya gya hai? Design kya hai? karta kya kya hai? usko deep me smjhte hai..

Pehle data ko smjhna and database set karna smjhenge..

Iske baad data ko use karke developer logic likhta hai python/java/dotnet/go/rust me

Iske baad frontend wale backend ke endpoint ko leke, apne frontend se connect kar denge..

1. Database Deployment (Manual + Automation)
2. Backend Deployment (Manual + Automation)
3. Frontend Deployment (Manual + Automation)

NextOps Industrial Software

Thermal Power Plant ke sare components ko monitor ka software
